

creating a green lifestyle...just for you

Triangle Sustainability

Home Energy Audit

The home energy audit service includes a visit to your home of about 2-4 hours. During this time, we'll begin collecting data on your family's energy consumption and perform a thorough inspection of your house's building envelope including your attic, basement, knee walls and other spaces where energy is commonly lost.

A few days after our visit, we'll deliver a customized audit report with detailed information on your current energy and resource usage and recommendations for economically reducing your consumption. The report and audit will include the following information:

- Home weatherization tips
- Air-leak and building envelope analysis
- Insulation diagnosis
- HVAC and duct system inspection
- Lighting review
- Crawl space assessment
- Appliance examination
- Water usage inspection
- Recommended improvements and estimated return on investment
- Potential renewable energy alternatives
